THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. **PROSECUTION ON THE MERITS IS CLOSED.** THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN **THREE MONTHS** FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. **THIS STATUTORY PERIOD CANNOT BE EXTENDED.** SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

## HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

**IMPORTANT REMINDER:** Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

## **DETAILED ACTION**

### ***Reopening of Prosecution After Appeal Brief***

In view of the Appeal Brief filed on January 14, 2008, PROSECUTION IS  
HEREBY REOPENED.

## **REASONS FOR ALLOWANCE**

The following is an examiner's statement of reasons for allowance:

An amended independent Claim 7 discloses a control circuit for an electromagnetic operating mechanism, including inter alia: a timer; a first and a second electronic switching devices connected in series with an operating coil; a step-down DC voltage converter including a third output and supplying a smoothed holding voltage at the third output; and a voltage source controllable by the timer and activating the first electronic switching device by a pickup voltage; the timer is being activated by a ramping up of the operating voltage; the series circuit and the first electronic switching device are supplied with the operating voltage; and the third output, the first output, and a control input of the second electronic switching device are interconnected, the third output being interconnected via a forward biased isolation diode.

The closest references for the claim are Van Lempo et al. (EP 0 091 648), Maier et al. (FR 2,808,619) and Seiler et al. (US 4,178,619). Regarding Claim 7, Van Lempo et al. disclose following elements: a timer (R1 – R3, C and T1 in Fig. 4), a first switching device (voltage follower) (T5 in Fig. 4) including a first output (upper terminal of the coil)

connected in series with an operating coil (L in Fig. 4), the first switching device is active for a duration of a pickup phase after the control voltage has been applied via the timer; a second switching device (T3 in Fig. 4) connected in series with the operating coil (L in Fig. 4), the second switching device being turned on as long as the control voltage (U3 in Fig. 4) is present. It further discloses the voltage source (U1 in Fig. 4) configured to activate the first switching device (T5 in Fig. 4) by a pickup voltage (short duration pulse); the voltage is controlled by the timer (R1 – R3, C, T1 in Fig. 4).

The operating coil and the switching path of the second switching device form a series circuit connected to the first output (upper terminal of the coil); the series circuit and the first switching device are supplied with the operating voltage (by the power supply U1 in fig. 4).

However, it does not disclose the rectifier circuit. Maier et al. disclose the rectifier circuit (4 in Fig. 1) connected to the control input (2 – 3 in Fig. 1) providing a second output (Uv in Fig. 1) and inherently supplying smoothed operational voltage, since otherwise the voltage regulator (8 in Fig. 1) would be unable to supply a steady DC voltage. It further discloses the step-down voltage converter (5 in Fig. 1) providing a step-down\_voltage at the third output supplying voltage to microprocessor (timer) 6 in Fig. 1.

In the Van Lempo et al. system modified according to teachings of Maier et al. the timer is activated by application (ramping) of the operating voltage. As to a connection between the outputs and the input, Maier et al. disclose the step-down voltage converter (5 in Fig. 1) providing a step-down\_voltage at the third output supplying the low voltage

to feed microprocessor (timer) 6, the equivalent to Van Lempo et al. system is a low voltage power supply U2 in Fig. 4. It additionally discloses the voltage stabilizer (8 in Fig. 1), which inherently performs stepping down a voltage in stabilization process, the voltage stabilizer provides a power supply to the solenoid (7 in Fig. 1); the voltage stabilizer output may also be considered as the third output.

As to a forward biased diode, the diode D2 in the Van Lempo et al. circuit addresses this limitation by providing connection between the low voltage power supply U2 (which is analog to the voltage converter 5 in Maier et al. circuit) and the first output (at the emitter of transistor T5 in Van Lempo et al.); the isolation diode (D2 in Fig. 4) is forward biased whenever the second switch (T1 in Fig. 4) is ON.

However, none of the references taken alone or combined together disclose the third output, the first output, and a control input of the second electronic switching device being interconnected while the third output being interconnected via a forward biased isolation diode.

Allowability resides, at least in part, in the above-described limitations, which has not been disclosed in the Prior Art in a search.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
